# My Gemstones App

## The gemologist's and collector's solution for organizing, identifying and labeling your collection.

And so much more.
Available on Android, Apples and PC.

*Pictured: a sample library of three stones, emerald, ruby and sapphire.*

### Record and locally store data

RI, birefringence, SG, optic character, pleochroism, fluorescence, inclusions, plus sections made for opal, diamond, sapphire, emerald, garnet and 17 more.

### Close-up camera

Opens in manual focus at the closest distance, with Focus and Light bars under your thumb; torch, 2× focus view and UV photos. Scan existing certificates to fill in the data fields.

### Identify a stone

Ranks about 115 natural, synthetic and imitation stones against your observations and shows what fits. SG calculator and size from a photo.

### Lab certificates

Easily add all physical certificate data to your database quickly with the camera scan feature.

### Field guide

Histories of 79 stones, a glossary with diagrams, grading guides for diamond, ruby, sapphire, emerald and more, calculators (carat weight, SG, RI, units, price) and charts (RI, SG, Mohs, heavy liquids).

### Multiple printing options

Labels with a QR code, credit-card-sized cards with the main photo, or a one-page certificate per stone. Letter or A4, or save as PDF.

### Share and trade

Share folders and collections with other My Gemstones users, photos and all, or quickly export a stone's data card as a JPEG.

### Folders and search

Folders, search, filters and sorting, bulk edit, duplicate, and mark as sold with the sale details kept.

### Export and backup

PDF catalog, Excel and CSV. Automatic weekly or monthly backups to a folder or SD card you choose.

### Price guide

A rough price range for each stone from size and variety, and recent eBay sold listings when you ask for them.

### Works offline

Your database lives on your phone and is always at hand: in the field, at a show, or with no signal at all.

### 15 languages

English and 14 more languages, including right-to-left Hebrew and Yiddish.

### Your personal gemstone database, hosted on your phone

Works fully offline. No account, no cloud, no ads, no tracking. The app has no internet permission; even certificate scanning runs on the phone.

Android 14 and newer · English and 14 more languages
